

Operation Practice of ISO17025 Management System in Able Laboratory ISO17025 is an international standard for laboratory accreditation services.

In March 2023, Able Laboratory invited professional teachers to guide training and fully operate the ISO17025 system. All laboratory personnel actively responded, focusing on customer needs, and conducted in-depth learning and practice on relevant laws/regulations, technical standards, system documents, policy objectives, so that the quality policy and objectives of Able Laboratory can be understood and implemented by laboratory employees. Each responsible department and personnel can perform their duties according to the requirements of system operation, Ensure the compliance, adequacy, and suitability of the laboratory quality management system operation.

To continuously ensure the full and effective operation of the entire system, and to ensure the standardization and accuracy of testing methods, Able Laboratory has developed eight quality and technical control plans, namely: daily supervision plan, internal audit plan, management review plan, training plan, instrument and equipment maintenance plan, instrument and equipment calibration plan, instrument and equipment periodic verification plan, and quality control supervision plan. The completion of the eight major plans has verified the effectiveness of the Able laboratory system and ensured the accuracy of the testing methods.
